

MARK L¹

32-1 Carpet Shampoo for Rotary Machines *Shampu De Alfombras Para Maquinas Rotatorio*

MARK L¹ Carpet Shampoo is a highly concentrated blend of mild synthetic detergents, water softeners, and optical brighteners for use with rotary type machines.

Use **MARK L¹ Shampoo** as directed with a rotary machine to create a rich lather that absorbs and suspends carpet soils. The stable soil laden foam can be immediately picked up with a wet vacuum. If a wet vacuum is not available allow the foam to dry completely. The dried foam crumbles easily and the resulting powder can be dry vacuumed in the usual manner.

This gentle shampoo is safe to use on all carpet fibers. It will not leave a sticky residue to mask fabric sheen and promote resoiling.

MARK L¹ Shampoo can be diluted (8-1) and used as a general prespotter. Dampen stained area with clear water and apply two (2) drops of **MARK L¹** solution per square inch of stain. Use scraper to work **MARK L¹** into stain and blot with white towel. Flush area with a few drops of clear water and blot until foam and stain are imperceptible.

Before shampooing remove furniture from area to be cleaned or place carpet protectors beneath furniture legs - do not remove protectors until carpet is completely dry.

Mix 4 ounces **MARK L¹ Carpet Shampoo** per gallon of warm water (32-1) and pour into carpet machine solution tank. Clean carpet in sections (approximately 5' x 5'). Shampoo first in one direction and then go back over the same area in a 90° cross direction. Use solution sparingly.

RECOMMENDED USES:

- Institutional Health Care and Hospitals
- Nursing and Extended Care Facilities
- Hotel/Motel/Restaurant

BENEFITS:

- Concentrated Strength
- Active on Organic and Inorganic Soils
- Prevents Set-In Stains
- Penetrates Water and Oil Base Spots

SPECIAL INSTRUCTIONS:

BEFORE USING ANY SPOTTER OR SHAMPOO

test a small inconspicuous area for dye stability and/or fabric deterioration. Read carefully all directions and warnings on each container. For more information consult your local carpet care supplier.

DIRECTIONS FOR USE:

Always vacuum carpets thoroughly before shampooing.

Mix 4 ounces of **MARK L¹** Carpet Shampoo per gallon of warm water for a 32 to 1 mixture. Add to carpet machine solution tank and shampoo in normal manner. It is generally best to shampoo carpets first in one direction, then go back over them in a cross direction of 90 degrees. **DO NOT OVER WET CARPET.**

More soil can be removed with the rotary machine method if you will do a small section of carpet (approximately 25 square feet), then vacuum thoroughly before proceeding to the next small section of carpeting with the rotary machine.

NOTE: ONLY WET AND DRY VACUUM IS TO BE USED TO PICK UP FOAM WHILE CARPET IS DAMP.

For additional cleaning and brightening of oxidized synthetic carpets, add 1 ounce of **MARK-BRIGHT** per gallon of shampoo solution. See complete instructions on **MARK-BRIGHT** container.
