

# DEFIANT

## Floor Coating *Capa Para Pisos*

**DEFIANT IS** for the floor maintenance professional who must get the job done “right the first time” and “on time” with a minimum of training and limited equipment.

You can level the “working” field with Defiant, the adaptable one product floor seal and finish.

Ideal for traditional scrub and recoat type maintenance, exceptional at 175 rpm for spray buff repair and enhancement, and truly excels with ultra high speed burnishing equipment. Can be used successfully with or without restoration type products.

Vinyl, terrazzo, marble and granite (glazed and honed), quarry tile, ceramics, brick, concrete, **DEFIANT** adapts to all types of floors. **DEFIANT** flexes on resilient floors. **DEFIANT** is safe on rubber and sealed wood. **DEFIANT** is self-polishing and recoatable...it does not require buffing. But, **DEFIANT** is buffable at 175 rpm up and burnishable at 2000+ rpm. If you don't have the equipment you want, you can still get great results with the equipment you have on hand.

**DEFIANT** is ideal for schools, hospitals, grocery stores, fast food restaurants, and everywhere the public demands good looking floors.

This product can be used to replace any water based polymer floor finish. Adapts to all types of flooring, such as vinyl, terrazzo, marble (glazed and honed), quarry tile, ceramic, brick, concrete, rubber, and sealed wood.

May be applied to most unsealed surfaces. This formula seals and finishes.

The initial shine is excellent. Buffing or burnishing is optional. For a brighter shine you may spray buff or burnish. This finish may be deep scrubbed and recoated as needed, or burnished to extend its appearance.

Application is easy. Product levels extremely well. Drying time is approximately 25-30 minutes depending upon humidity, ventilation, temperature, and thickness of application.

### **FEATURES AND BENEFITS:**

- **Multi-Use:** Suited to all types of flooring.
- **Minimize Training:** Easy to train when one product works at all job sites. A sealer/finish combo makes it even simpler.
- **Maximize Inventory:** Buy large quantities of one product, eliminate pails of seldom used finishes. Use less storage space, and turn inventory faster.
- **Reduce Rework:** Take away the variables and reduce mistakes. No more call-backs to redo a job.
- **Equipment Flexibility:** Use the equipment available at the facility. No need to buy or transfer machinery. Get great results with the equipment on hand.

### **DIRECTIONS FOR USE:**

#### **APPLICATION:**

Follow simple basic floor finishing procedures: Strip or deep scrub floor. Rinse thoroughly. Allow floor to dry completely. Apply thin coats with a clean damp string mop. Allow to dry thoroughly between coats.

#### **MAINTENANCE:**

Available equipment, level of maintenance desired, time and labor force will determine the method used. Minimal maintenance includes daily dust mopping and damp mopping as needed to maintain a clean surface. Deep scrub periodically, allow to dry, and add 1 or 2 thin coats to maintain protective film and shine.

Longer wear and higher shine can be obtained by applying several initial coats of finish and burnishing on a regular basis.
