

ELIMINATOR

Premium Dry Feed Chlorinated Warewash Detergent *Detergente Cloruro De Alta Calidad Para Lavadoras De Trastes*

A power-packed alkaline detergent that cleans thoroughly even when dishes are improperly scraped and poorly rinsed. The excellent water conditioning system suspends food particles to promote continuous machine skimming action. The same water conditioning agents prevent scale build-up which can hamper machine function and damage delicate parts.

Another desirable feature is the package—a wide mouth jar with screen cap. The jar is part of the dispensing system which keeps the product dry until it is fed into the machine. Once the product is packaged, it has limited exposure to air, thus it retains more chlorine for faster, better destaining results.

ELIMINATOR'S feed rate is rigidly controlled to stop costly detergent overshoot. The non-clogging, granular formula feeds in a broad range of water pressures and temperatures.

RECOMMENDED USES:

ALL TYPES OF MECHANICAL DISHMACHINES

- Flight
- Rack
- Conveyor

BENEFITS:

- High Alkaline Formula
- Feed System controls feed rate, halts chlorine deterioration
- Prevents Mineral Deposits on wash arms and spray jets
- Non-clogging Granular Form
- Superior Performance in varying water temperatures and pressures

SPECIAL INSTRUCTIONS:

- Identify dispenser type
- Follow product label directions for installing container, cycling machine and adjusting concentrations.

DIRECTIONS FOR USE:

FOR ELECTRIC DISPENSERS:

1. Fill dispenser with product.
2. Turn on machine dispenser.
3. The dispenser will maintain the proper concentration.

FOR HYDRAULIC DISPENSERS:

1. Fill dispenser with product on the basis of 1/4 ounce per gallon of water for the initial charge.
2. Then fill the dispenser at least 1/2 full, adding detergent at proper intervals to the dispenser.

FOR MANUAL FEEDING:

1. Calculate gallonage of machine based on manufactures instructions and charge at the rate of 1/4 ounce per gallon of water.
