

# SYN-LUBE

## Conveyor Lubricant *Lubricante Para Portadores*

The proper conveyor lubricant is essential in modern high volume food processing and bottling facilities. Using the right lubricant eliminates excessive friction, thus reducing wear and adding years to the chain's life. **SYN-LUBE** is the ultimate in chain lubrication. It provides superior slickness at all line speeds for bottles, cans and cases. Conveyor lines start up INSTANTLY without manual lubricating, and even heavy loads travel trouble free...no production downtime due to bottles toppling at transfer points. **SYN-LUBE** is a true highly concentrated lubricant that is formulated to meet the requirements for USDA authorization under categories A1, E1 and H2.

Economical usage is achieved with an automatic dispensing pump system such as Pex-O-Matic, Crown, Dema, etc. Simply install the pump unit, connect to **SYN-LUBE** drum or tank and water line. Incoming water is automatically proportioned with an accurately measured amount of **SYN-LUBE**, then it discharges onto the line at selected lubrication points. The product to water ratio may be adjusted for maximum performance and economy.

### **RECOMMENDED USES:**

- Dairies
- Breweries
- Canneries
- Food Processors
- Large Dishwashers

### **BENEFITS:**

- Lubricates
- Reduces Chain Wear
- Cleans
- Eliminates Downtime
- Saves Time and Money

### **SPECIAL INSTRUCTIONS:**

- Ask your **PECK'S** Representative for special instructions to maximize the products performance and minimize usage.

### **DIRECTIONS FOR USE:**

Consult your **Peck's Products Company** Food and Beverage Specialist for recommended use dilutions and dispensing instructions.

This 100% synthetic formula cleans as it lubricates to prevent soil, mold, or slime build-up on the line, and it is low foaming.
